Statistical Assignment 7

Open the data set indicated on the syllabus or website ('Stats7OneWayANOVASPAAN.xlsx').

There are two data sets in this spreadsheet: Choose SpanBet. We run the experiment in class but you will not actually add to this data set. To be honest this is a within-subject experiment that we are pretending is between subject. Bad me.

Run the appropriate test. Hand in a small results section presenting your data and then do a small discussion section trying to make sense of the data. There will be a paper available to read to help you write this part of the section (http://psychclassics.yorku.ca/Miller/). Add it to a results section.
