Overview and Course Objectives

With your participation, we expect this course to:
1. engage you in advanced issues of research and design
2. provide practice in the art of collaboration via close interaction with your colleagues
3. develop critical thinking as applied to psychological research
4. prepare you for the empirical project you will conduct next semester

The Empirical Research Project

By the end of this academic year (winter term) you will have developed, conducted, analyzed and reported your own research project. This project will be conducted either individually or with one other person.

This Fall you will develop and write a formal research proposal including an introduction, method section, proposed analyses section, and detailed (week-by-week) timeline for conducting the project during the next term. By the end of the Fall term, all the materials you will need to conduct your research in the Winter term should be collected and prepared. This project needs to be an advanced piece of research; by that we mean a project with more depth than the projects you have conducted as part of coursework in Research Methods or other classes. It should be equivalent in scale to an “Independent Study.”

Note: It is expected that you will work in pairs on your projects. If you wish to work individually, you will need to justify your choice. At the end of the first week, you will submit to the faculty the name of your partner (who should be in agreement) or write a justification for working alone. The department faculty will then decide the pairing. You will need compelling reasons to work alone.
Detailed Information about Assignments and Course Activities

Research Journal / Retrospective Report. You have a choice of keeping a weekly journal or writing a retrospective paper at the end of the course.

1. If you choose the journal option, you should keep a weekly record of your progress – thoughts on the project, the challenges you encounter, how you overcame them, choices you made which helped move you forward, etc. Each journal entry should be at least half a page in length. The journal should reflect the development of your ideas rather than simply catalog your ideas. The evaluation of your journal will be based upon how well you show the development of your ideas.

2. Alternatively, you may elect to write a 7-10 page retrospective in which you reflect on your experiences in 401. What have you learned about conducting research? What were some of the important challenges you faced in completing your project? Knowing what you know now, what do you wish you had known when you were beginning 401?

Week 1: Prepare for the semester

At the end of Week 1, we need to know whether you will partner or if you wish to work on your project alone. This information is to be emailed to John by 11 on Friday.

Week 2: Global Topic Ideas

Email John by 11 on Friday a paragraph or two listing the one or two global research areas you are considering for your project (e.g., under cognition – attention, under social psychology – influence, under mental illness – schizophrenia). Additionally, you should come to class having conducted an examination of recent years’ senior projects (see Psychology Library or department website for copies), and a general perusal of relevant PsycINFO literature for the topic area(s) you are interested in.

Week 3: First ideas presentation / Initial list of references & rough research ideas

You will be leading a discussion with a small group about the steps you’ve taken so far. Your presentation should include the following: what was the global topic that interested you and how you narrowed it down; where your interest came from; what you’ve done to research that interest (e.g., a lit search, including how you conducted it); what problems you’ve encountered so far; and what you learned so far. You should aim to have read at least three articles or book chapters on your topic by this point. You should plan to facilitate / direct the conversation, and you should have organized information and questions for your classmates that will generate a helpful conversation about your ideas. However, do not feel pressured to have a complete study worked out at this point.
Also, you need to email to each member of the department an initial list of at least 10 references (properly formatted in APA style) that you have reviewed or at least read the abstract for. Include a brief paragraph describing your basic, preliminary research ideas at the top of the page.

**Weeks 4 & 5: Conferences with Faculty**

During scheduled class time (and outside class time as needed), you will meet at least 3 faculty members to discuss your ideas. Each faculty member will have a copy of your global interests, and your preliminary ideas with reference list. However, come prepared to explain your thesis thoughts and ask questions. We will track how many faculty you meet with and this will figure in your participation grade. Meetings typically run 30 minutes.

By Friday, 10/3, email each member of the department a 1-page paper describing (1) your research project with a tentative hypothesis and (2) the two faculty members you feel you could work most effectively with on your project. We will read and take any comments you have into account. We will use these papers along with your other interactions with the faculty to assign you to your faculty thesis advisor. You will spend the next several weeks working with that advisor to develop your proposal. To every extent possible, both student and faculty needs will be considered when assigning pairings (but do note that it is unlikely we’ll be able to make everyone happy).

On Monday, 9/29, the class will meet to hear a presentation about careers by Margaret Krantz, Director of the Career Center. On Friday, 10/3, the class will meet in the computer lab, SCC 148, to be introduced to web-based research methods, including a tool to assist in the development of web surveys.

**Week 6: Research Idea Discussions, Research Hypothesis & Advisor Preference**

You will lead a small group discussion of your or your team’s research idea as it is at this point in time. Note: both members of a team are expected to be active presenters. Bring a hard copy of your current hypothesis research question, the citation information and abstracts for 5 articles and a paragraph discussing how these articles are relevant to your intended study. The relevance may be in terms of how they influence your theoretical ideas or how they are influencing your ideas about your research method or if they suggest measures you might use or take. It is important that these articles are really relevant to your project as it stands at this point in time. The document should be emailed to the faculty member and students who will be meeting with you by 5 pm on the day before you meet. Peers’ email addresses are available in the Coursemates section of MyHanover. The goal of this discussion is to help you refine your current thinking about your project, so think of how this group can help you improve your project idea.

Actual advisor assignments will be announced Fri of this week.

**Weeks 7-8: Advisor Meetings, Prepare for Presentation**
During weeks 7 and 8 we will not meet as a class. Instead, you should arrange a regular weekly meeting time with your advisor to discuss your proposed study. You and your thesis advisor should begin immediately to work very closely together to nail down and whip into shape the study that you want to do. During these weeks, you should 1) be preparing to present your proposal to the class (see below), 2) begin working on the first written draft of your proposal, 3) track down any materials (e.g., questionnaires, stimuli) you will need for your project, and 4) submit your journal to your advisor as a progress check (if you’re keeping a journal). If you are not keeping a journal, this may be a good time to start drafting your retrospective report.

**Weeks 9-11: Presentations**

At some point during these weeks you will make a formal presentation of your research ideas so that your classmates can help you refine and anticipate problems with your design. You need to indicate the background research of the proposal, the methods for the project, a rough idea of how you will analyze your data, and the timeline for completing the project. Of course, some aspects of this proposal may be rough and some aspects of your design will change (perhaps dramatically) as a result of the feedback you receive. However, you should consider this a serious design proposal and consider yourself a moderator of the discussion of the proposal. Have questions ready if necessary to prompt your classmates’ feedback. You will have 15 – 20 minutes for your presentation & discussion. This is a letter-graded assignment.

*Note: typically these presentations are made using PowerPoint. The PowerPoint file needs to be emailed to John the day before your presentation.*

*First draft of proposal and materials. Turn in the first draft of your written research proposal and the materials you will need (e.g., questionnaires) to your thesis advisor by Friday of this week. This is un-graded but required and will figure in to participation grade.*

**Week 12: Second Draft of Proposal due MONDAY**

By Monday of this week submit the second draft of your proposal to your advisor. Your grade on this assignment accounts for current quality and progress from first draft. Pace your work as the semester progresses! Also note that standards for grading drafts are generally different than those for final papers. A high grade on a draft does not necessarily translate into a high grade on a final paper.

**On the Day the Final is Scheduled for PSY401: Proposal, Journal**

Written Proposal Due. At the end of the term you will submit a detailed, APA style proposal that will include a full literature review, method section, proposed results and a timeline. More details on this will be provided later.

*Research Journal or Retrospective Report due to your Thesis Advisor.*

<td>63-66</td>
</tr>
<tr>
<td>D-</td>
<td>60-62</td>
</tr>
<tr>
<td>F</td>
<td>0-59</td>
</tr>
</tbody>
</table>

Late Penalties

To encourage timely preparation, there is a penalty for assignments that are submitted late. Assignments submitted after class on the day they were due will receive a -10% penalty. An additional -10% penalty will accrue with each additional day late.

Attendance & Participation

Since we have arranged this course so that each of you will benefit from each other’s input, it is vital that you attend all classes and participate fully. Your participation will be “graded” because we’d like to emphasize its importance and give credit to your important efforts in this area. Listen carefully, ask questions when you are confused or have a helpful suggestion, and work hard to elicit feedback from other students when you are responsible for leading the discussion.
